CONSTRUCTION QUALITY CONTROL ON SITE

REF: 39 **DATES:** 5 - 9 Nov 2018 **VENUE:** Malaysia (Kuala Lumpur)-Grand Millenium Hotel

Quality control in construction of the structure is a complete function which involves management, statistics and engineering.

In this course, focus on using the statistics as a control tool used to control all the activities of the construction projects and specially the concrete product. The quality control of the concrete is illustrated in scope of the different codes and specifications.

In a hot climate, it need more precaution in concrete industry and on the construction of the building to match with the requirement to this weather, So this course introduces the ways to control the precaution and the specification recommendations in detail.

The practical tools to make a control on the concrete industry and the whole project include the field-testing and the required laboratories facilities and test will be presented.
